DLP Policy Templates:

DLP comes with templates to save you the work of building a new set of rules from scratch.

You can modify these requirements to fine tune the rule to meet your organization's specific requirements.

Examples of DLP policy templates:

- HIPAA data
- PCI-DSS data
- Gramm-Leach-Bliley Act data
- Locale-specific personally identifiable information

Microsoft named a Leader in IDC MarketScape for Modern Endpoint Security across Enterprise, Midsize, and Small Businesses

IDC MarketScape: Worldwide Modern Endpoint Security for Enterprises 2024 Vendor Assessment (doc #US50521223, January 2024)
IDC MarketScape: Worldwide Modern Endpoint Security for Midsize Businesses 2024 Vendor Assessment (doc #US50521323, February 2024)
IDC MarketScape: Worldwide Modern Endpoint Security for Small Businesses 2024 Vendor Assessment (doc #US50521424, March 2024)

IDC MarketScape vendor analysis model is designed to provide an overview of the competitive fitness of information and communication technology (ICT) suppliers in a given market. The research methodology utilizes a rigorous scoring methodology based on both qualitative and quantitative criteria that results in a single graphical illustration of each vendor's position within a given market. The Capabilities score measures vendor product, go-to-market, and business execution in the short term. The Strategy score measures alignment of vendor strategies with customer requirements in a three to five-year timeframe. Vendor market share is represented by the size of the icons.

Market Share leader in corporate endpoint security

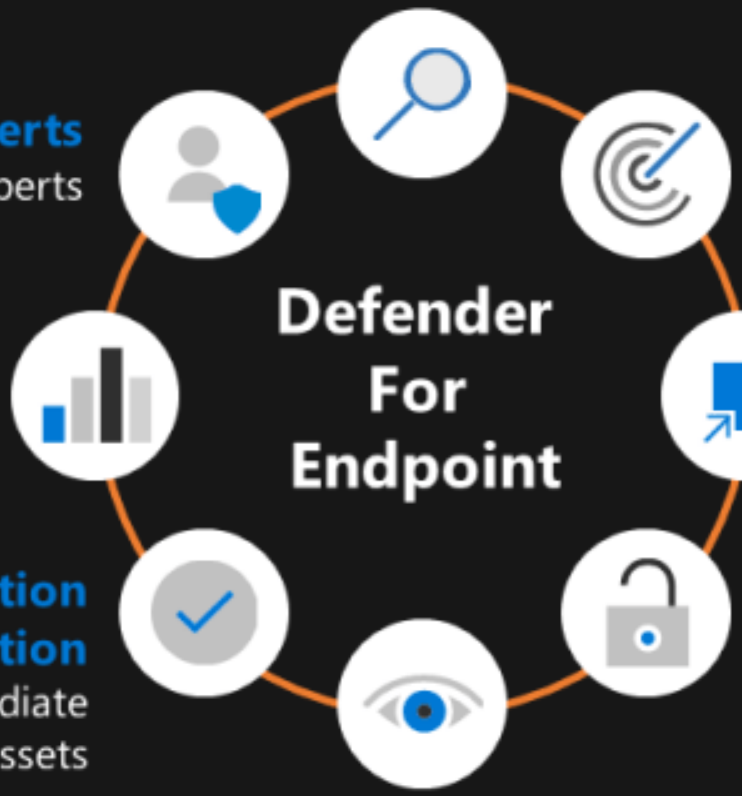

IDC ranks Microsoft #1 in WW Corporate Endpoint Security 2023 Market Share

"…Microsoft has the highest market share at 25.8%, that's a 40.7% increase in share over the previous year. "

Source: IDC, Worldwide Corporate Endpoint Security Market Shares, 2023: Pace of Growth Accelerated Through 2023, doc #US49349323, June 2024

- ☑ Management & APIs
- ☑ Security Portal
- ☑ Integration with M365

Simplified Onboarding and Administration

Wizard-driven onboarding and easy to use management controls

1. Onboard new Windows devices in a few simple steps
2. Recommended security policies activated out-of-the-box
3. Action-oriented dashboard help prioritize tasks

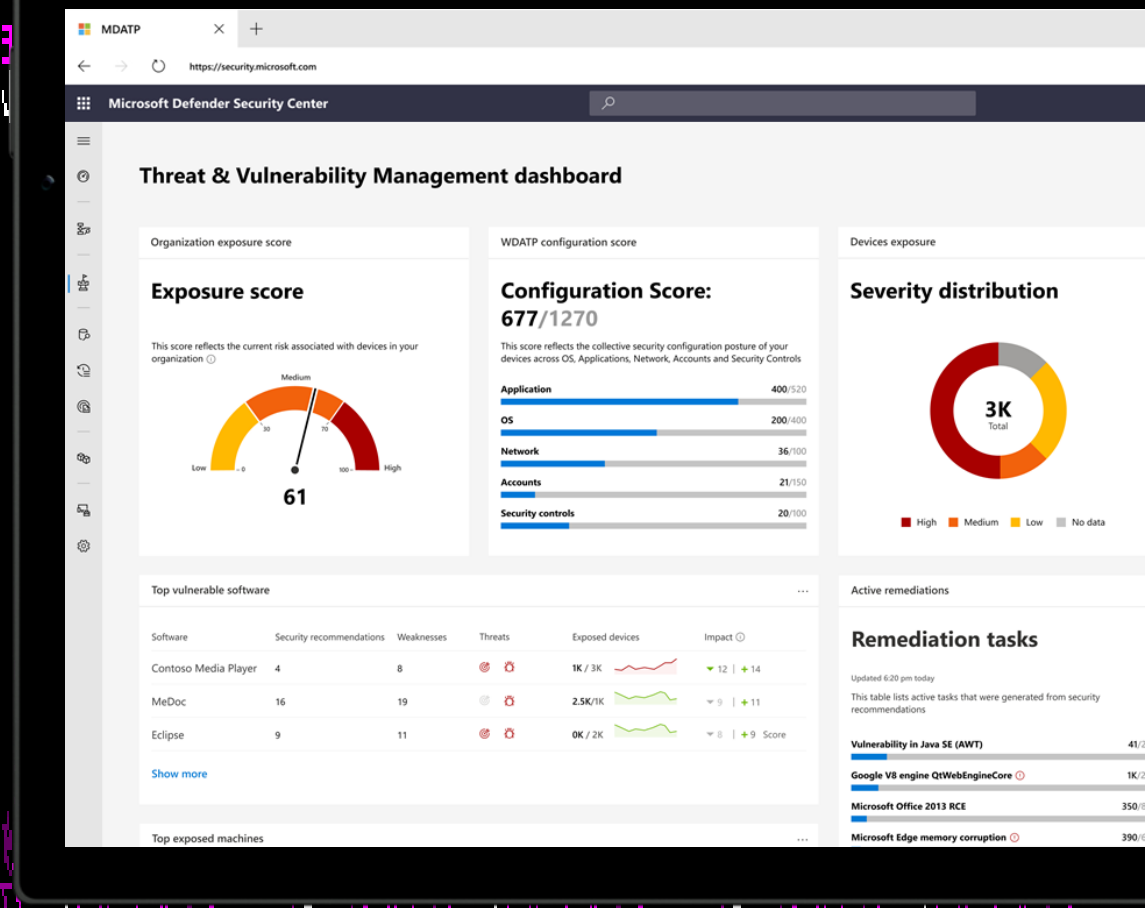

iOS, and Android requires Microsoft Endpoint Manager. Please see Documentation for more detail.

Threat & Vulnerability Management

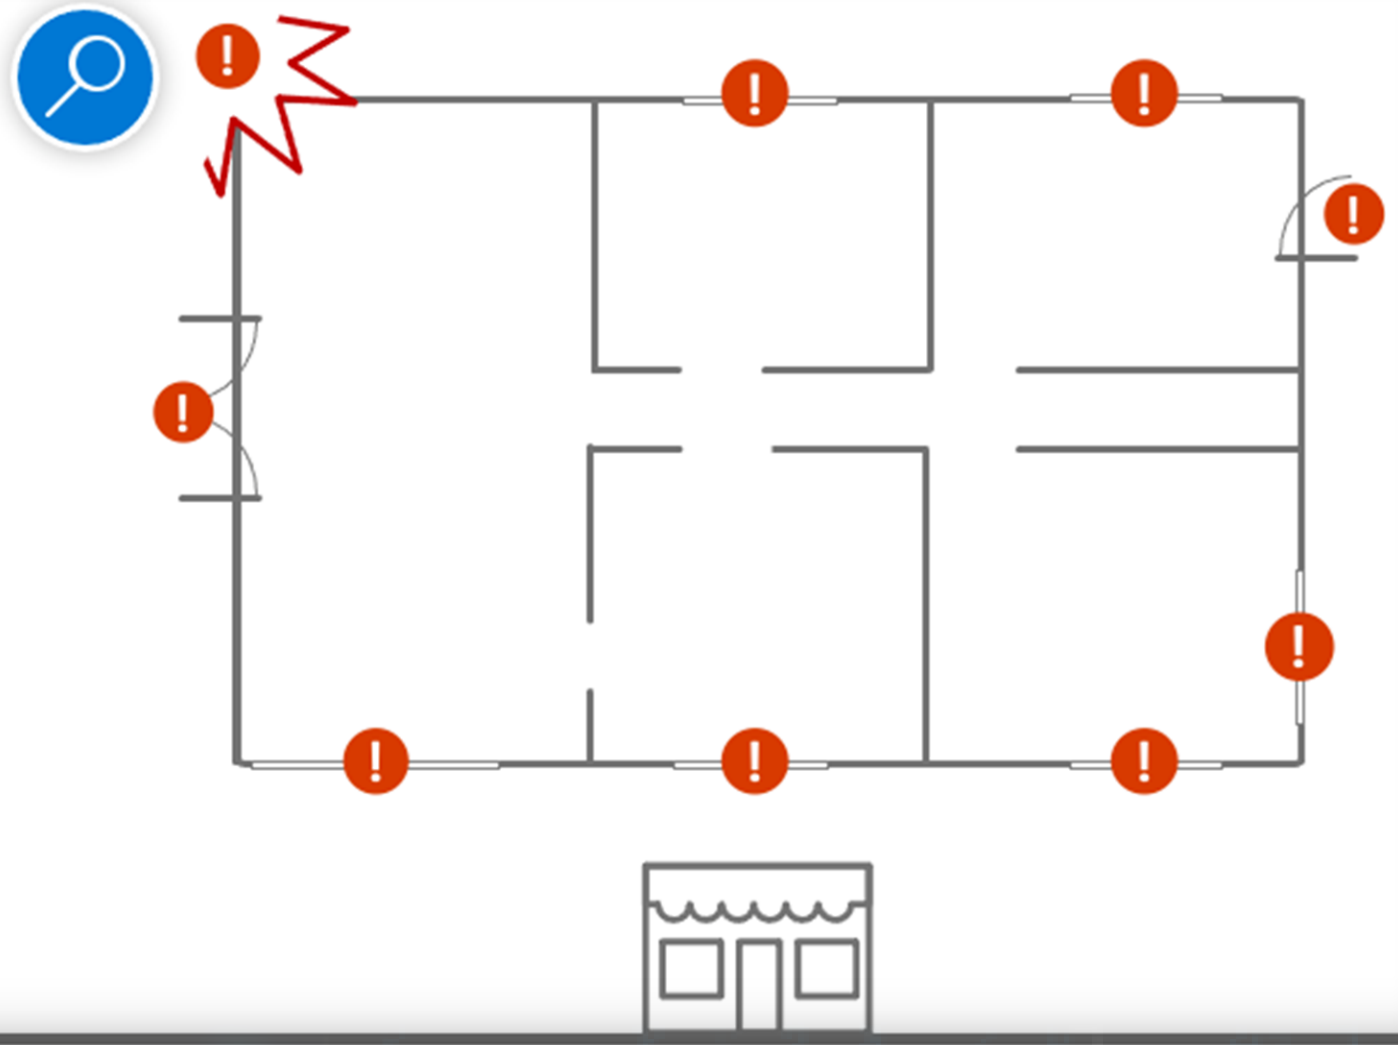

A risk-based approach to mature your vulnerability management program

1. Continuous real-time discovery
2. Context-aware prioritization
3. Built-in end-to-end remediation process

Threat and vulnerability management

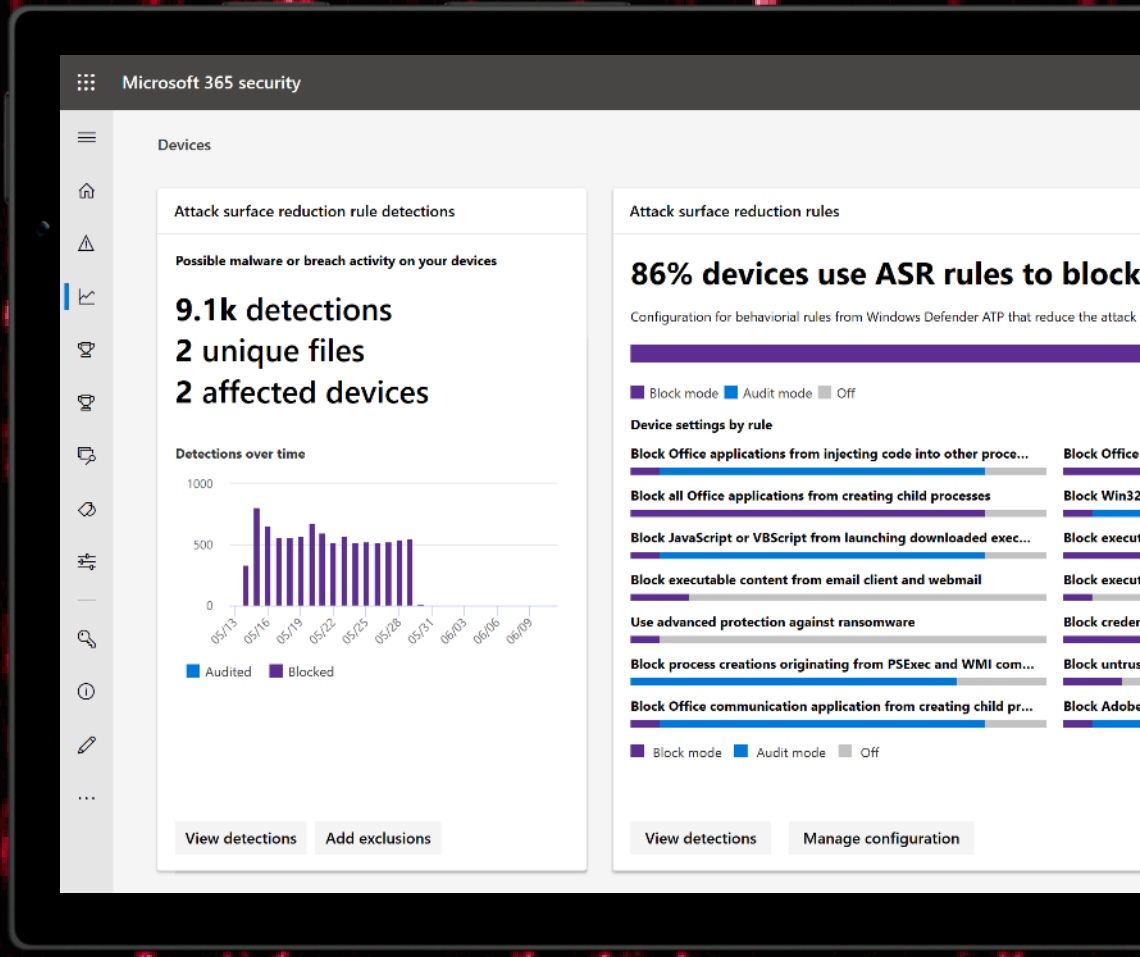

- Damage to building creates a risk
- Building inspector assesses damage
- Inspects rest of the structure
- Recommends repairs

Attack Surface Reduction

Protect against risks by reducing the surface area of attack

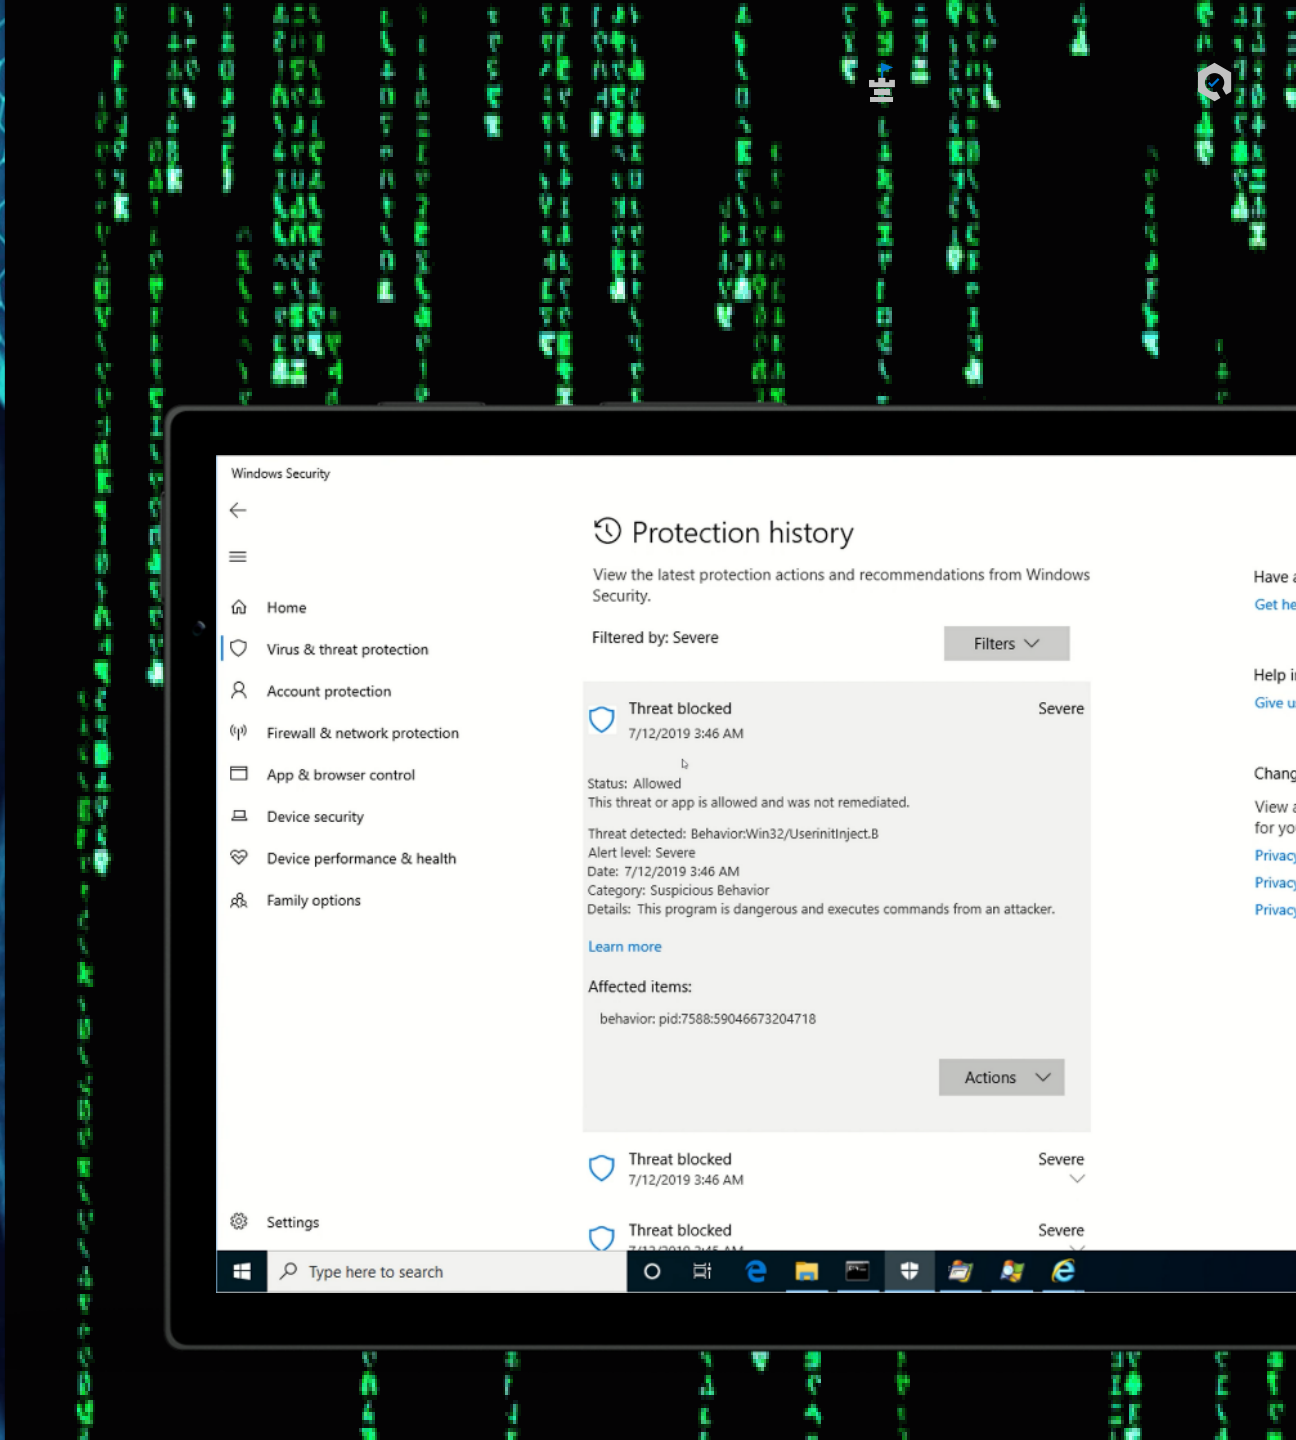

1. System hardening without disruption
2. Customization that fits your business
3. Visualize the impact and simply turn it on

Next Generation Protection

Helps block and tackle sophisticated threats and malware

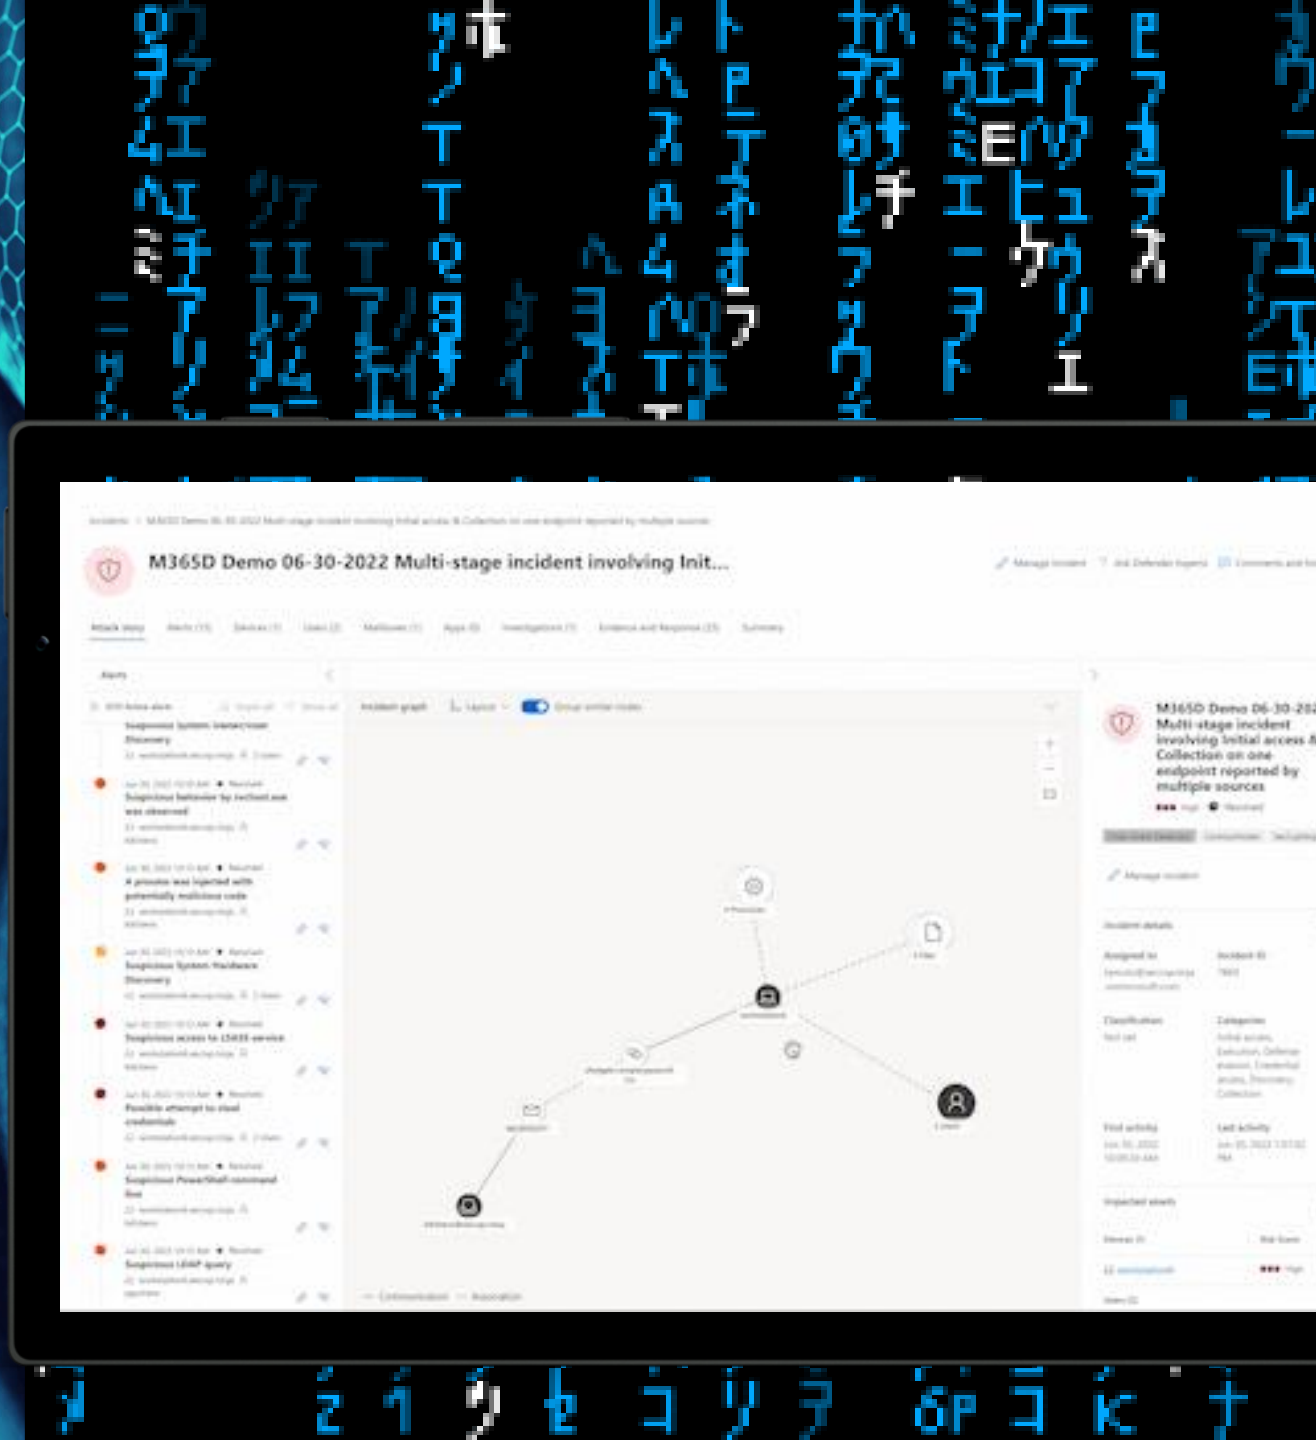

1. Behavioral based real-time protection
2. Blocks file-based and fileless malware
3. Stops malicious activity from trusted and untrusted applications

Endpoint Detection & Response

Detect and investigate advanced persistent attacks

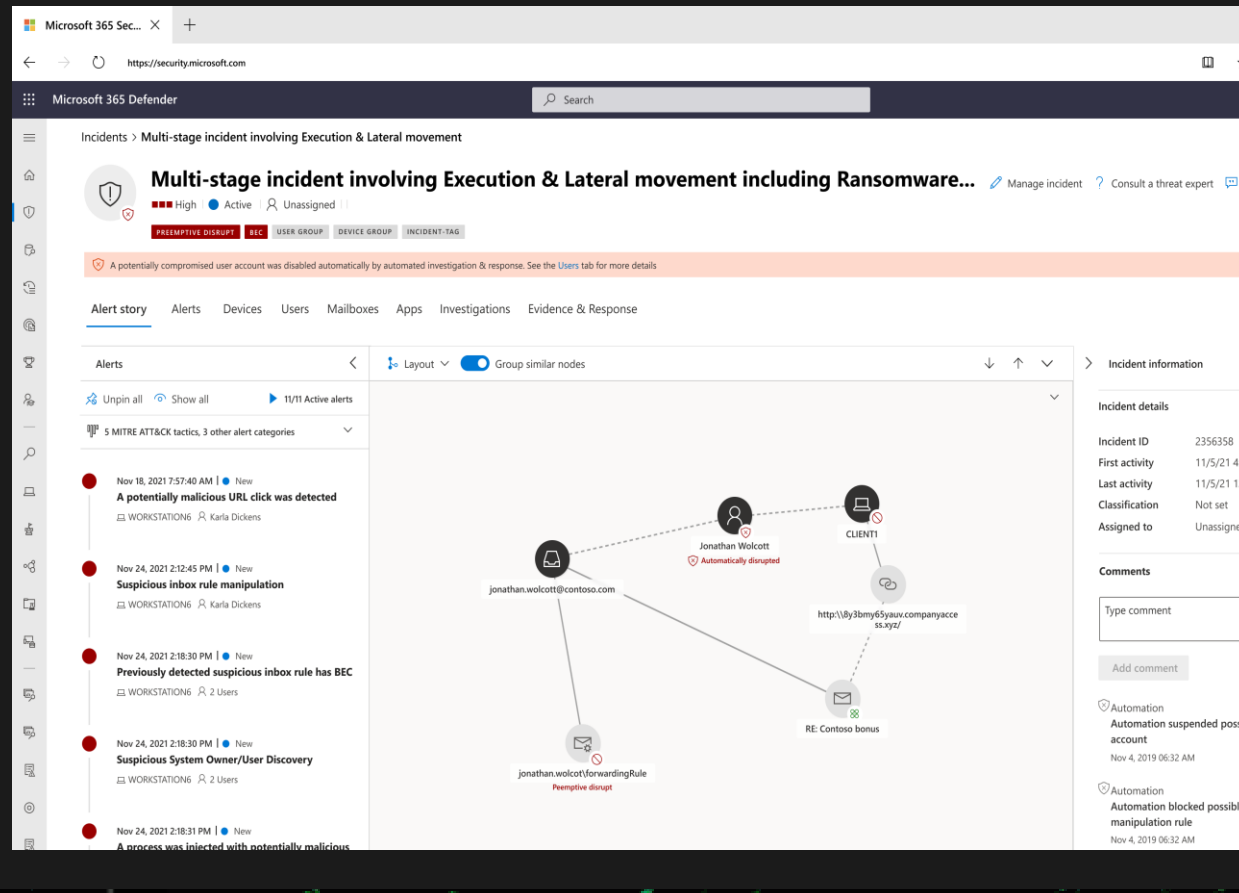

1. Behavioral-based detection
2. Manual response actions for a device or file
3. Live response to gain access to devices

Attack Disruption

Use AI models and high-fidelity signals to automatically disrupt sophisticated attacks and simplify complexity for your IT teams

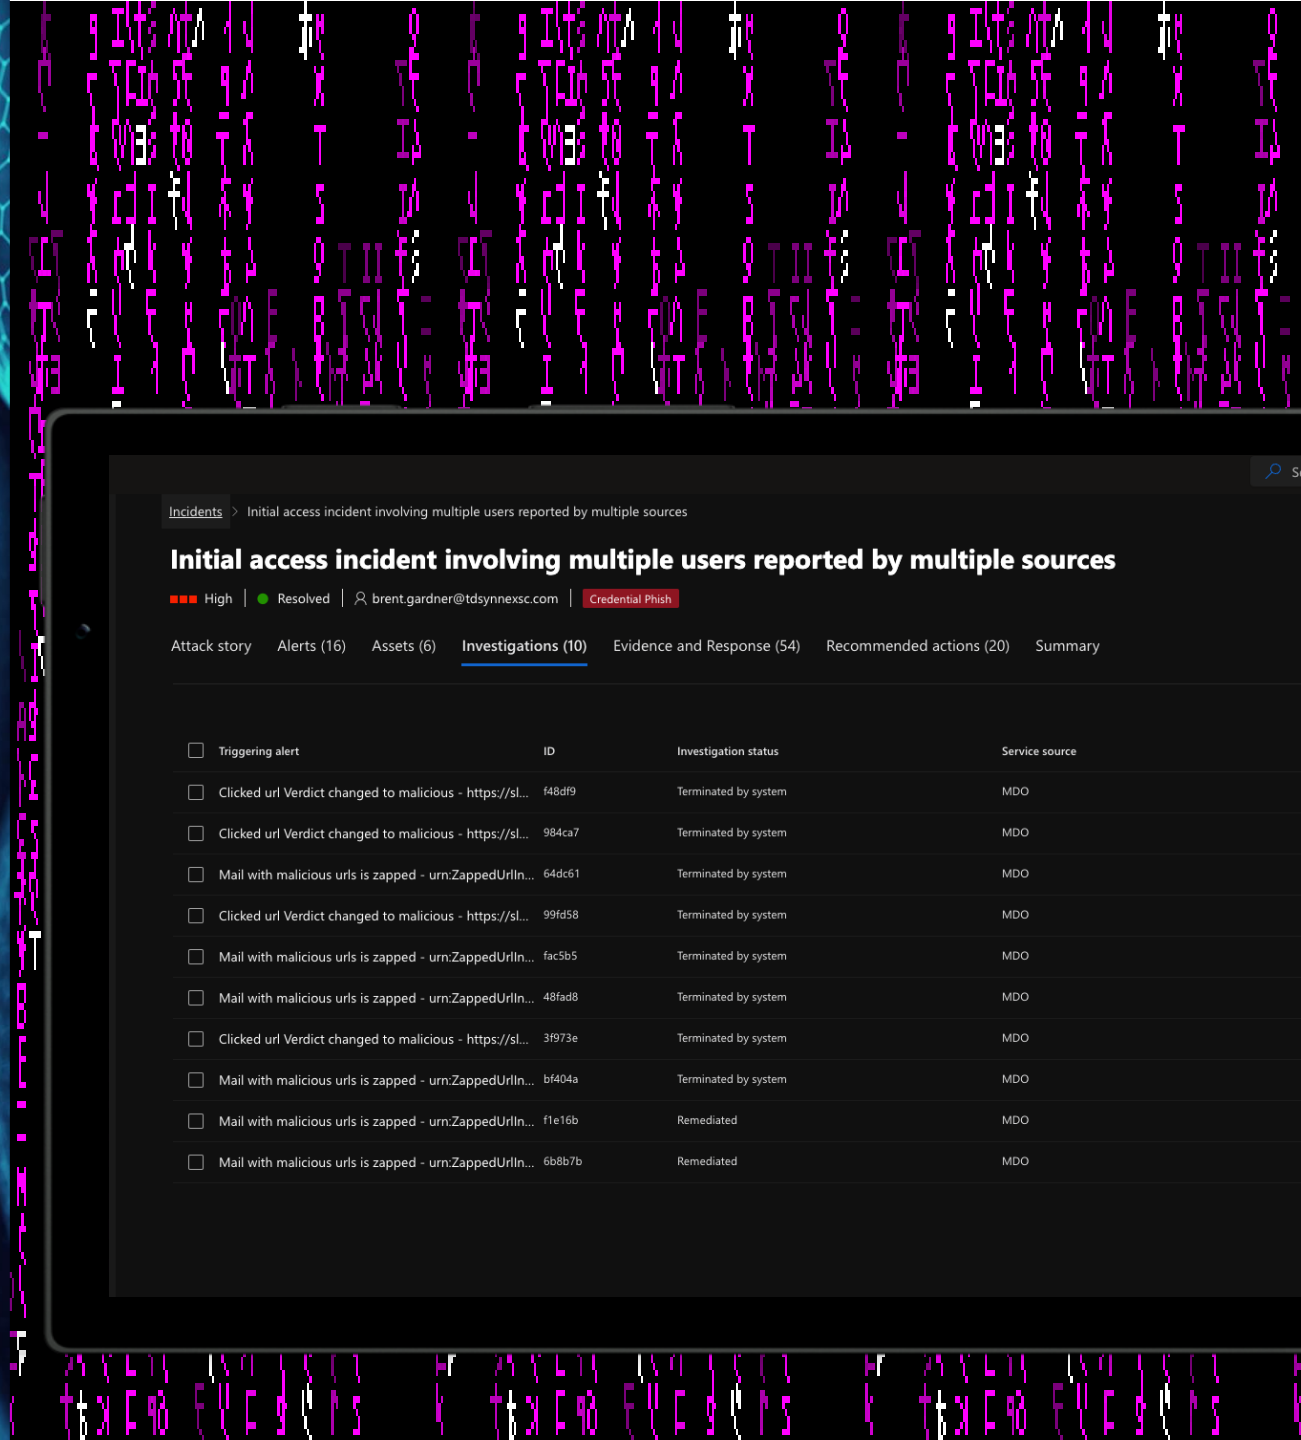

1. Automatically contains infected devices and users in real-time
2. AI-powered automation disrupts lateral movement leaving the IT team full control to investigate
3. Reduces the overall cost and limits the impact of an attack

Auto Investigation & Remediation

Automatically investigates alerts and helps to remediate complex threats

1. Mimics the ideal steps analysts would take
2. Tackles file or memory-based attacks
3. Scales security operations with 24x7 automated responses

Defender for O365

- Email Protection

Safe Attachments

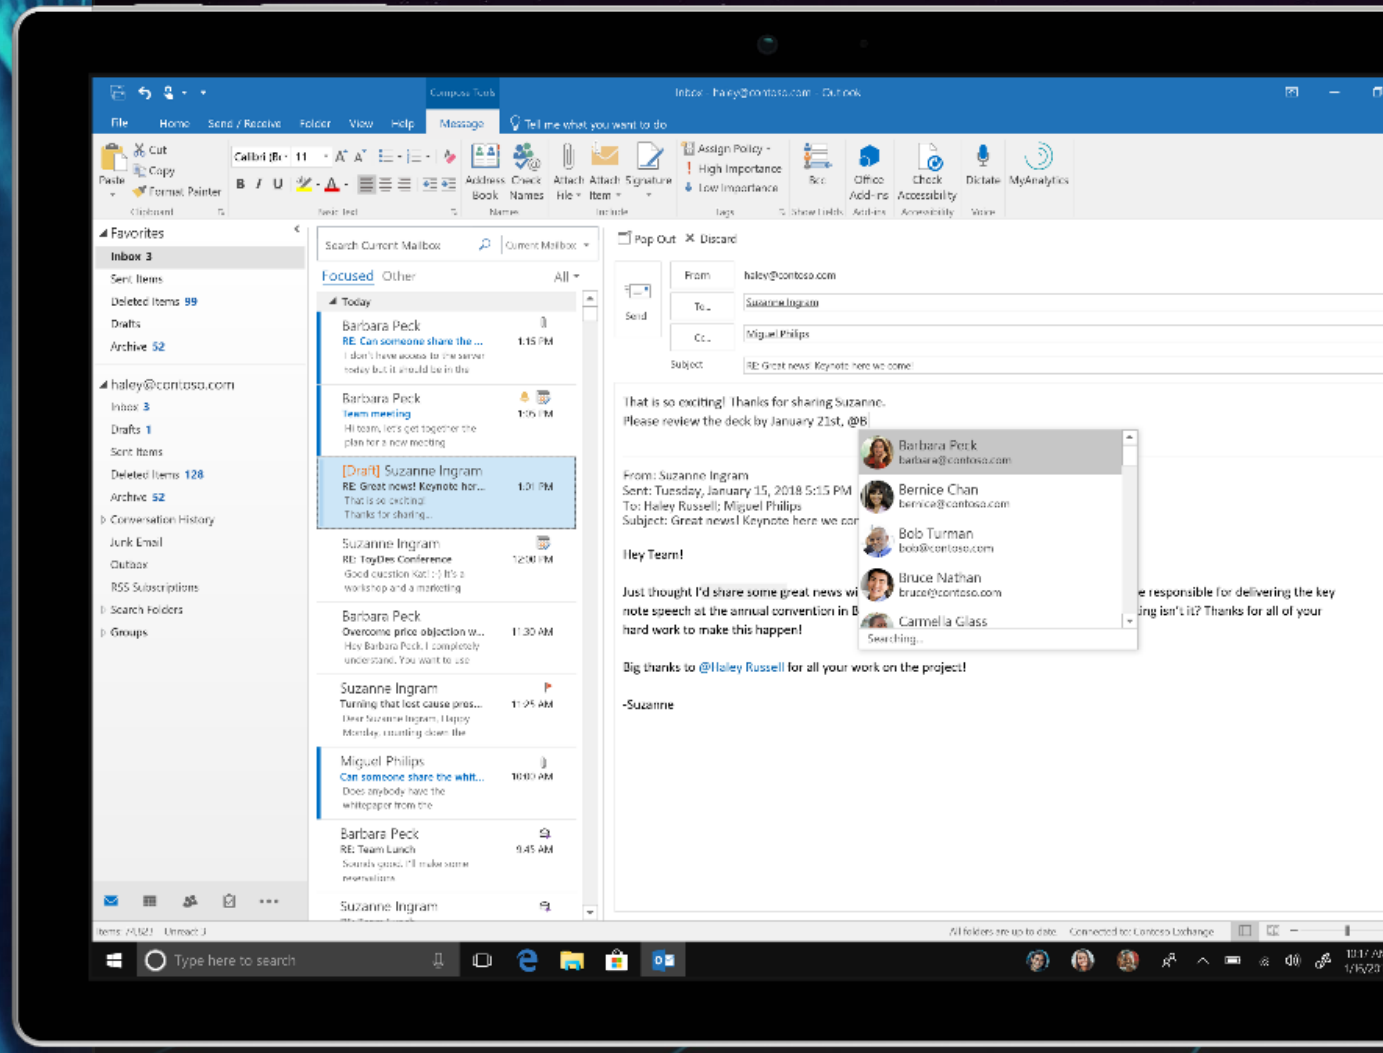

Set policies to **identify if email attachments are malicious**

Catch identified threats in corporate mail before they reach the inbox

Extend protection to files in SharePoint Online, OneDrive for Business, and Microsoft Teams

View ATP reports in the **Office 365 Security and Compliance Center dashboard**

How it works: Email attachments are opened and tested in a virtual environment. If malicious, the attachment is blocked. Protection also applies to attachments shared via SharePoint Online, OneDrive or Teams.

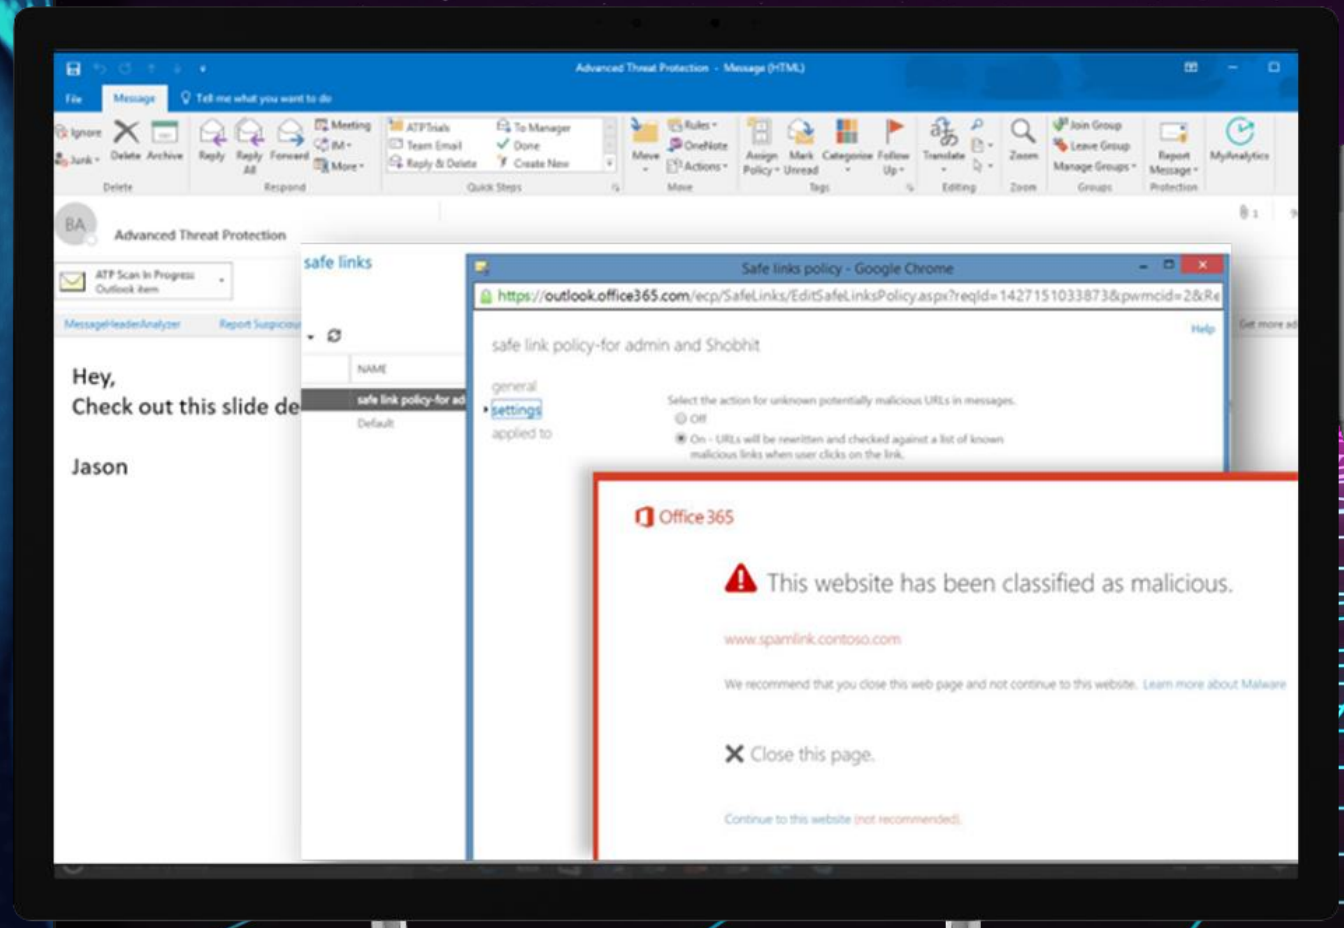

Safe Links & URL Detonation

Prevent users from being compromised by files linked to malicious URLs

Safe Links policy can allow users to bypass warnings and enable tracing

How it works : Each time a user clicks on a URL, the link is checked by ATP Safe Links before redirecting to the website.

ATP Anti-phishing

What it is:

Mitigation against spoofing attacks / forged domains

Identifies senders that fail authentication

How it works:

An array of techniques, updated as threats evolve, help block sophisticated impersonation attempts.

- Detection of forgery of the 'From: header'
- Understanding the history of the source's email infrastructure
- Machine learning algorithms that understand a user's normal patterns of contact with others

Emails may be blocked, sent to junk mail, quarantined, or have a Safety Tips displayed

Examples:

Cóntoso.com instead of Contoso.com

meganb@**conotos**.com instead of meganb@**contoso**.com)

Email encryption

What it is:

Purview Message Encryption provides easy-to-use email encryption capabilities for sending encrypted email

Basic encryption on be default

How it works:

The message text and all attachments are encrypted.

Only the recipient can decipher the message for reading.

Anyone else who tries to open the email sees indecipherable text.

Identity verification:

The way the recipient verifies their identity depends on their email system:

- For Office 365 users, authentication happens automatically
- Google, Yahoo, or Outlook.com/Hotmail users sign in with their Google, Yahoo, or Microsoft account
- All others sign in with a one-time passcode

Microsoft Defender Suite for Business Premium

Advanced security tools to secure your devices, identities, email, and apps.

Microsoft Defender Suite ($10.00)

Microsoft Defender for Office 365 Plan 2	**$5.00**	A cloud-based email filtering service that helps protect your organization against unknown malware and viruses by providing robust zero-day protection and includes features to safeguard your organization from harmful links in real time. In addition to Plan1, Plan 2 also offers automated investigation and response, threat trackers, and an attack simulator
Microsoft Defender for Cloud Apps	**$3.50**	A multimode Cloud Access Security Broker (CASB). It provides rich visibility, control over data travel, and sophisticated analytics to identify and combat cyberthreats across all your cloud services.
Microsoft Entra ID P2	**$9.00**	Microsoft's cloud-based identity and access management service, which helps employees sign in and access resources. In addition to Free and P1 features, P2 also offers Identity Protection to help provide risk-based Conditional Access to apps and critical company data and Privileged Identity Management to help discover, restrict, and monitor administrators and their access to resources and to provide just-in-time access when needed.
Microsoft Defender for Identity	**$5.50**	A cloud-based security solution that leverages your on-premises Active Directory signals to identify, detect, and investigate advanced threats, compromised identities, and malicious insider actions directed at your organization.
Microsoft Defender for Endpoint Plan 2	**$5.20**	A unified endpoint security platform for preventative protection, post-breach detection, automated investigation, and response. The product offers Threat and Vulnerability Management, tools to surgically reduce the attack surface, next-generation protection to block threats and malware, Endpoint detection and response to detect advanced attacks, automated investigation and remediation of threats and Managed threat-hunting service.
Safe Documents[1]	*	Uses Microsoft Defender for Endpoint to scan documents and files that are opened in Protected View or Application Guard to automatically check Office documents (Excel, PowerPoint, Word etc.) "against known risks and threat profiles" before users open them.
Application Guard for Office 365[1]	*	Isolates untrusted documents to protect users against malicious and potentially harmful threats. at risk. When a user encounters a malicious document, it is safely isolated.
Microsoft Defender for IoT – EIoT[2]	**$0.85***	Includes coverage of 5 EIoT devices for each Microsoft 365 E5 license; additional device coverage is $0.85 per device per month. Provides discovery of network devices, vulnerability management, and threat detection and response.

Prices – ERP /per user/per month
[1]Only provided via Microsoft 365 E5 or Microsoft Defender Suite
[2]Per device per month

Microsoft Defender Suite for Business Premium

Business Premium + Defender Suite

Microsoft 365 Business Premium

Productivity and Security Suite

- Entra ID P1: **Conditional Access** based on predefined conditions like device compliance, location, and app sensitivity
- MDO P1: Email and collaboration security, including **anti-phishing, anti-malware**, and **safe links/attachments.**
- MDB: AI-powered, SMB optimized **endpoint security with EDR and automatic attack disruption.** Across Windows, macOS, Linux, Android, and iOS.
- Purview Information Protection: **Encrypt emails** and discover, classify, and manually label sensitive data.
- Intune P1: Manage **devices and work data** on company-owned and employee devices. Remove business data from lost or stolen devices

Microsoft Defender Suite

Enterprise-Grade Security Solution

- Entra ID P2**: Risk-based conditional access**, visibility into risky sign-ins and user behavior anomalies. **ID Governance** and **Privileged Identity Management**
- Defender for Identity: A **cloud-based identity security solution** that leverages your on-premises Active Directory signals to identify, detect, and investigate **advanced threats, compromised identities, and malicious insider actions** directed at your organization
- MDO P2: Advanced email and collaboration security with **automated investigation and response,** and **end user phishing simulation trainings**
- MDE P2: **Endpoint security and EDR with advanced threat hunting,** as well as access to threat experts for additional investigations
- Defender for Cloud Apps: **SaaS security solution to automatically discover and block apps** based on risk level, unusual user activity, or data-sharing behavior to protect against sophisticated SaaS-based attacks

Microsoft Purview Suite for Business Premium

Business Premium + Purview Suite

Microsoft 365 Business Premium

Productivity and Security suite

- Entra ID P1: **Conditional Access** based on predefined conditions like device compliance, location, and app sensitivity
- MDO P1: Email and collaboration security, including **anti-phishing, anti-malware**, and **safe links/attachments.**
- MDB: AI-powered, SMB optimized **endpoint security with EDR and automatic attack disruption.** Across Windows, macOS, Linux, Android, and iOS.
- Purview Information Protection: **Encrypt emails** and discover, classify, and manually label sensitive data.
- Intune P1: Manage **devices and work data** on company-owned and employee devices. Remove business data from lost or stolen devices

Microsoft Purview Suite

Simplified compliance and data governance

- eDiscovery & Audit**:** Empowers legal and compliance teams with integrated tools and deep visibility to **streamline investigations, enforce legal holds, and maintain regulatory readiness.**
- Insider Risk Management: Helps detect and mitigate internal threats with **privacy-respecting behavioral analytics and granular communication controls.**
- Information Protection & Governance: Enables organizations to **classify, protect, and manage sensitive data across its lifecycle**, ensuring secure collaboration and compliance at scale.

Microsoft Purview Suite for Business Premium

Manage risks, protect and govern sensitive data, and respond to regulatory requirements

Microsoft Purview Suite for Business Premium ($10.00)

Information Protection & Governance ($7.00)

Purview Data Lifecycle and Records Management
Use retention labels and policies to retain and delete information.

Purview Data Loss Prevention (DLP)
Identify, monitor, and automatically protect sensitive information stored across Microsoft 365 locations.

Purview Information Protection
Identify and protect sensitive data including credit card, bank account, and passport numbers.

Purview Message Encryption
Send and receive encrypted email messages to people inside and outside your organization.

Microsoft Defender for Cloud Apps ($3.50)
A multimode Cloud Access Security Broker (CASB). It provides rich visibility, control over data travel, and sophisticated analytics to identify and combat cyberthreats across all your cloud service.

Purview Customer Key
Help meet compliance requirements by exercising control over your organization's encryption keys.

Insider Risk Management ($6.00)

Purview Data Connectors
Apply various Microsoft Purview solutions to third-party data that has been imported and archived in Microsoft 365.

Purview Customer Lockbox
Maintain control over your content with explicit access authorization for service operations.

Purview Communication Compliance
Minimize communication risks by detecting, capturing, and taking remediation actions on inappropriate messages in your organization.

Purview Privileged Access Management
Help protect your organization from breaches through granular access control over privileged admin tasks.

Purview Insider Risk Management
Detect, investigate, and take action on risky activities in your organization.

Purview Information Barriers
Restrict communications between specific groups of users inside your organization to safeguard internal information.

eDiscovery & Audit ($6.00)

Purview eDiscovery (Premium)
Manage the end-to-end workflow of internal and external investigations.

Purview Audit (Premium)
Gain visibility with new auditing capabilities that help with forensic and compliance investigations.

Plan/Add-on	Customer Gains	Partner Opportunity	Microsoft Programs to Leverage
Business Premium	Secure modern workplace: MFA, Conditional Access, full EDR, basic email protection, device management.	Entry-level upsell from Basic/Standard. Easy to position as "secure by default."	- Microsoft 365 Business Premium Workshop - SMB Immersion Briefing - CSP Accelerate (SMB focus) - Microsoft Cloud Partner Program (Modern Work designation)
BP + Defender Add-on	Advanced threat protection: automated email investigation, identity risk detection, CASB, AD monitoring.	NEW Upsell path for SMBs needing ransomware protection, phishing defense, identity governance.	- Microsoft Defender Workshop (Endpoint + Identity) - Security Immersion Briefing - CSP Incentive Accelerator (Security SKUs) - Microsoft Security Partner Playbook
BP + Purview Add-on	Enterprise-grade compliance: auto-labeling, endpoint DLP, insider risk analytics, long-term audit.	NEW Ideal for regulated SMBs (finance, healthcare). Position as "E5 Compliance for SMB."	- Microsoft Purview Workshop - Compliance Immersion Briefing - Microsoft Compliance Partner Program - CSP Accelerate (Compliance SKUs)
E3	Scalable enterprise foundation: basic security, larger mailboxes, full Office suite, hybrid AD support.	Mid-market growth path. Position for orgs scaling beyond 300 users.	- Microsoft 365 E3 Workshop - Modern Work Immersion Briefing - Partner-led Proof of Concept (PoC) funding - Solution Assessment Program
E3 + Defender Add-on	Full threat protection: same as E5 Security, without full E5 cost.	Modular upsell. Great for customers not ready for full E5.	- Microsoft Defender XDR Workshop - Security Copilot Preview Briefing NEW - CSP Accelerate (E5 Security components) - Microsoft Security GTM Toolkit
E3 + Purview Add-on	Full compliance suite: same as E5 Compliance, modular upgrade path.	Modular upsell. Great for customers not ready for full E5.	- Microsoft Purview Advanced Workshop - Compliance Copilot Briefing NEW - Microsoft Compliance GTM Toolkit - Partner-led Compliance Assessments
E5	All-in-one: full security, compliance, analytics, AI (Security Copilot), SIEM credits, advanced governance.	High-margin sale. Incentivized via Microsoft Security Copilot inclusion. Ideal for security-first orgs.	- Security Copilot Immersion Briefing NEW - Microsoft 365 E5 Security Workshop - FastTrack for Microsoft 365 - Microsoft Security Partner Incentives - Microsoft AI Cloud Partner Program

Feature Area	What It Means	What It Does	Example
Identity Protection	Security for user accounts and sign-ins	Detects risky logins, enforces MFA, blocks compromised accounts	A user logs in from an unusual location—Entra ID flags it as risky and blocks access until verified
Device Management	Control and security of company devices	Enrolls devices, applies security policies, ensures compliance	A company laptop is lost—Intune remotely wipes it and blocks access to company data
Endpoint Protection	Security for desktops, laptops, mobile devices	Detects malware, isolates infected devices, auto-remediates threats	A ransomware file is downloaded—Defender for Endpoint quarantines it and isolates the device
Email Protection	Security for email and collaboration tools	Blocks phishing, scans attachments/links, investigates threats	A user receives a phishing email—Defender for Office 365 removes it and alerts the admin
Cloud App Security (CASB)	Monitoring and control of cloud app usage	Detects unsanctioned apps, blocks risky behavior, enforces policies	An employee uploads sensitive data to Dropbox—Defender for Cloud Apps blocks the upload
On-Prem AD Monitoring	Threat detection in on-prem Active Directory	Detects lateral movement, privilege abuse, insider threats	A user queries AD for admin groups—Defender for Identity flags it as suspicious
Information Protection	Classification and encryption of sensitive data	Applies sensitivity labels, encrypts files/emails, controls access	A document marked "Confidential" is auto-encrypted and restricted to internal users only
Data Loss Prevention (DLP)	Preventing sensitive data from leaving the organization	Blocks sharing of PII, monitors clipboard, email, file uploads	A user tries to email a spreadsheet with SSNs—DLP blocks the email and alerts compliance
Insider Risk Management	Detecting risky behavior from internal users	Flags data exfiltration, policy violations, unusual activity	An employee downloads 500 files before resigning—Purview flags it for review
Audit & eDiscovery	Tracking user actions and searching data for legal needs	Retains logs, enables search across mail/files, supports legal holds	A company is sued—eDiscovery finds relevant emails and Teams chats for the case
Security Copilot (AI)	AI assistant for security teams	Summarizes incidents, suggests actions, answers questions	An admin asks "What threats did we see this week?"—Copilot summarizes alerts and recommends actions
SIEM Integration	Centralized log and alert management	Aggregates data from multiple sources, enables threat hunting	Sentinel collects logs from Defender, firewalls, and servers—analysts investigate a breach across systems

“How do you ensure your employees can work securely from anywhere?”
→ Leads to **Risk-Based Conditional Access**, **Defender for Endpoint**, and **Identity Protection**.

“Have you ever had an employee accidentally click on a suspicious link or email?”
→ Opens the door to **Defender for Office 365**, **Safe Links**, and **Attack Simulation Training**.

“Do you have a plan in place if someone’s credentials are stolen?”
→ Translates to **Identity Protection**, **Privileged Identity Management**, and **Automated Response**.

“How confident are you that your business could detect and respond to a cyberattack in real time?”
→ Highlights **Microsoft 365 Defender**, **Advanced Hunting**, and **Threat Analytics**.

“Do you know which devices are accessing your company data—and whether they’re secure?”
→ Leads to **Device Compliance Policies**, **Defender for Endpoint**, and **Conditional Access**.

Compliance-Oriented Questions (Purview Suite)

“Do you handle sensitive customer or financial data that needs to be protected or classified?”
→ Points to **Microsoft Purview Information Protection** and **Auto-labeling**.

“Are you required to keep records of communications for legal or regulatory reasons?”
→ Introduces **eDiscovery**, **Retention Policies**, and **Advanced Audit**.

“Do you have visibility into how internal communications are managed and monitored?”
→ Leads to **Communication Compliance** and **Insider Risk Management**.

“How do you ensure your data stays protected when shared externally?”
→ Highlights **Data Loss Prevention (DLP)** and **Sensitivity Labels**.

“Do you know where your most sensitive data lives—and who’s accessing it?”
→ Opens the conversation around **Data Map**, **Access Reviews**, and **Activity Explorer** in Purview.

Bridge data security gaps

A negligent user accidentally exposed sensitive information.

Jane Doe

- Collected proprietary info from multiple companies leveraging her privileged title.
- Attempted to copy the info to an external hard drive but was blocked by the DLP policy at Company A.
- She found a loophole and uploaded sensitive content to her personal cloud storage at both companies.
- She copied those files from the cloud storage to an external hard drive at Company B.
- She was terminated from both companies and her hard drive underwent an authority investigation.

Microsoft Purview data security

Leverage Data Security Posture Management recommendations to create correlated DLP and Insider Risk Management policies to identify risks of sequential activities that might leak sensitive data.

Use built-in ML trainable classifiers in Information Protection to discover and auto-label intellectual property and protect it with encryption and access policies.

Use 100+ ready-to-use indicators and ML models in Insider Risk Management data leak/theft polices to detect Jane Doe as a repeat offender.

To better understand the breadth and depth of the data impacted by Jane's actions, perform AI-powered deep content analysis with Data Security Investigation.

Use Adaptive Protection to enforce a block Data Loss Prevention policy on high-risk users. Jane's actions to upload files to a cloud storage and copy to a hard drive can be blocked dynamically, while others could work as usual.

Adaptive Protection with Entra Conditional Access can help block access to apps that store data.

Prevent data leakage

A negligent user accidentally exposed sensitive information.

John and Alice

John is working on a highly sensitive M&A deal which only a few Contoso employees know about.

John mentions the name of company he is studying without sharing anything more about the deal with Alice.

Alice asks Copilot for M365 to find information on the deal and Copilot provides her a summary with the link to the document.

Alice then uses the summary to ask Contoso's finance agent to email her sensitive details about the project.

Out of curiosity, Alice wants to see what ChatGPT would summarize, so she pastes the content of the file in ChatGPT.

Microsoft Purview data security

Use **DSPM for AI** to understand how your users are interacting with Copilot and other GenAI apps. Get details on which GenAI apps are being used and what sensitive data is flowing through the prompts, as well the risk level of the users using GenAI apps.

Use **Oversharing assessments for Copilot in DSPM for AI** to get details on labeled and unlabeled files and the files use.

Use **Information Protection** to apply default sensitivity labels to document libraries such that new documents automatically inherit the same protection.

Use built-in ML trainable classifiers in **Information Protection** to discover and auto-label M&A documents and protect it with encryption and access policies.

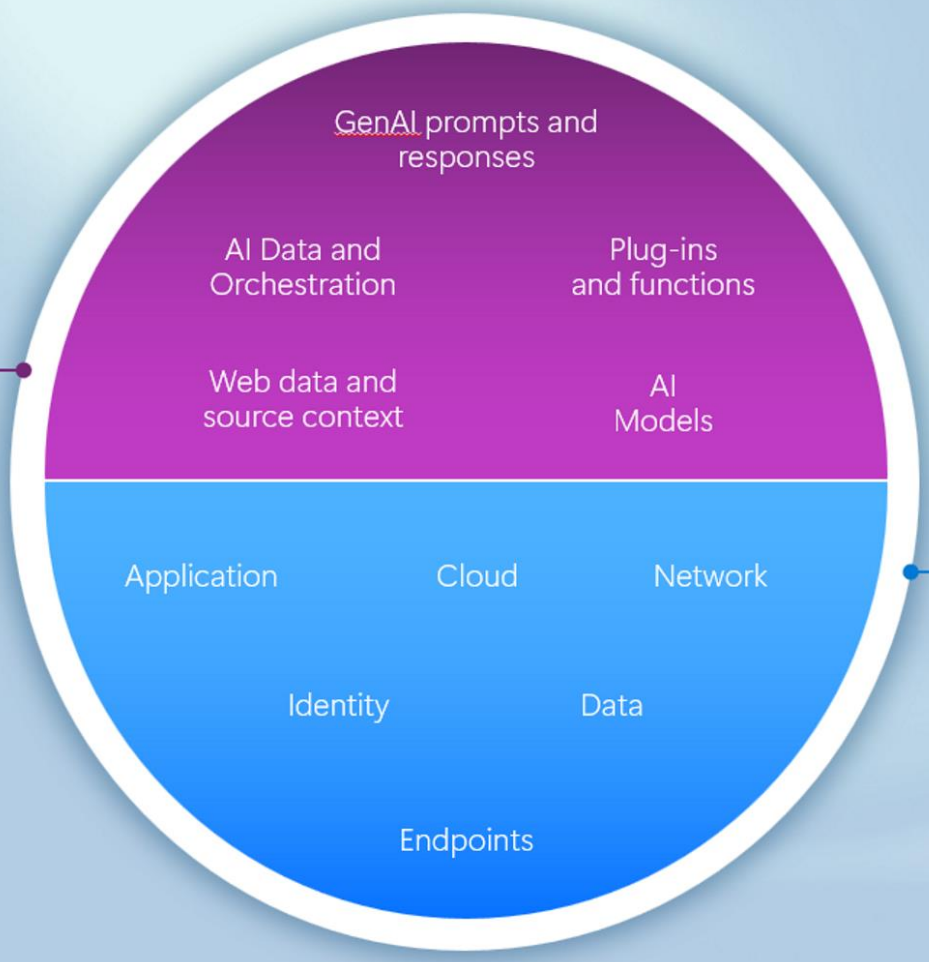

Copilot inherits the labels and the protections that come with it.

Create a **DLP for Microsoft 365 Copilot** policy to prevent Copilot from summarizing the labeled documents.

Use **Data Loss Prevention** policy to prevent out of policy sharing of sensitive data, such as emailing it or users pasting or uploading sensitive data to consumer GenAI apps through an email or endpoint DLP policy.
