Why Migrate To CSP?

CSP is about choosing a partner you trust—one with the competence to execute cleanly and the focus to deliver measurable outcomes.

Unlocking Partner Value

Empowering partners to deliver deeper impact, stronger engagement, and accelerated cloud growth.

From Spend to Strategy

Elevating cloud consumption decisions into strategic levers that drive competitive advantage.

Execution, Quantified

Turning operational performance into measurable outcomes that showcase real business value.

Execution, Quantified

The results speak for themselves: partners completing Direct-to-CSP migrations with us see between 20% and 30% growth on average in the months following the transfer.

And the scale is significant—In 2025, the CloudShift program drove 240 opportunities from 109 different partners, with 135 of those opportunities successfully completed.

TD SYNNEX | Microsoft

Execution, Quantified

Partner-led. Outcome-driven. Proven at scale.

+$4M ARR Growth

$20M → $24M since CloudShift launch

~32% growth driven by Direct-to-CSP execution

Transfer Types

CSP to CSP

Transferring subscriptions from one CSP provider to another.

Web-Direct or Field-Led to Partner Led

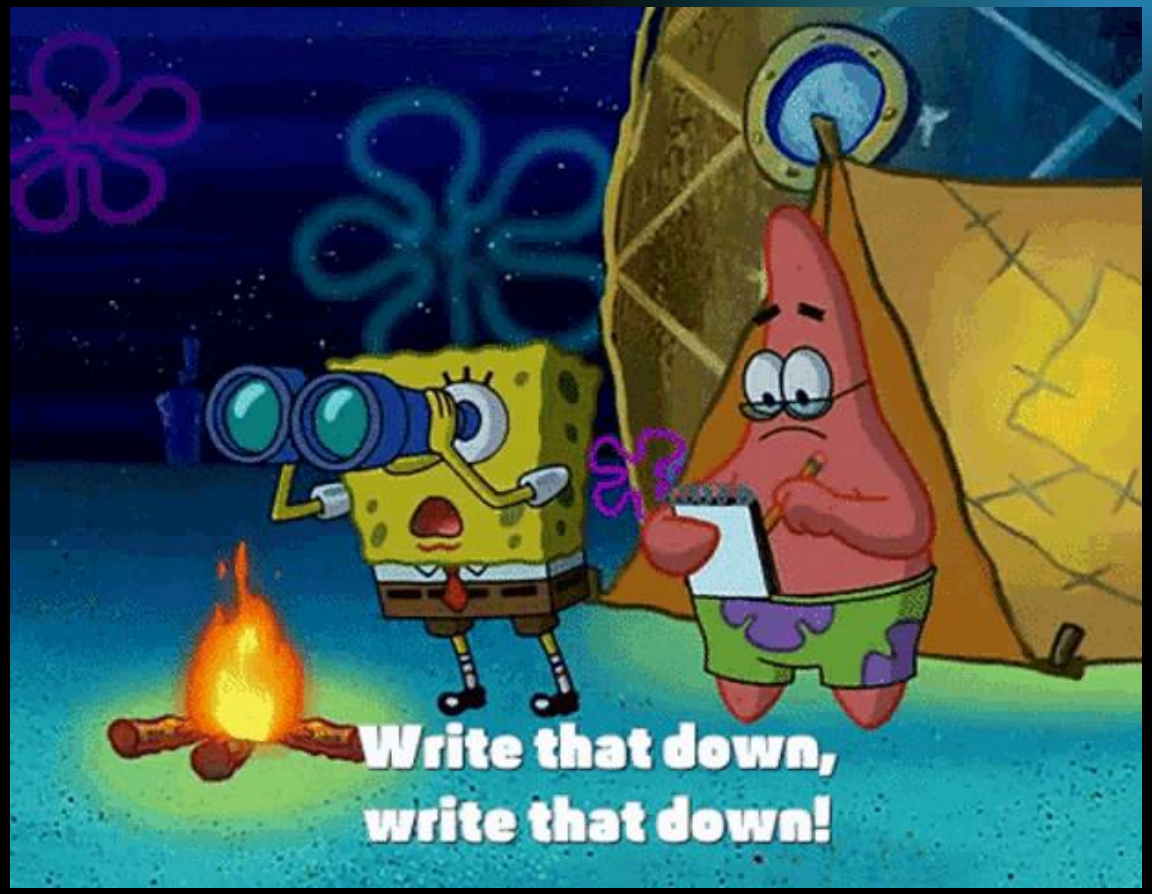

Transferring subscriptions that are direct with Microsoft to CSP without downtime.

Technical Migration

A manual migration of resources from either on-prem to Azure or Azure to Azure.

Important Considerations

- **As a best practice, AOBO should be addressed prior to any attempts at transfer execution.**
  - A failure to do so will result in the Azure environment becoming unmanageable by TD SYNNEX and no partner earned credit being received.
- **Azure Break-Fix Support Tickets**
- **Cost Saving Instrument Purchases**
- **Quotas**
- **ACM Data**

CSP to CSP

Partner-Led to Partner-Led

- Transferring an Azure subscription from one CSP provider to another is a structured, Partner Center–driven process designed to maintain continuity while aligning the customer with their preferred partner.
- The process is initiated by the new CSP Indirect Provider and follows a set of required steps to ensure proper permissions, access, and billing alignment.
- The primary reason end-users will change partners is a result of the lack of overall value they feel they are receiving from their current provider.

Direct to CSP

Azure “Easy Button”

- Used for web-direct (pay-go) and field-led transfers.
- Tool requires no downtime or interruption in the environment.
- Marketplace products can be a transfer blocker.

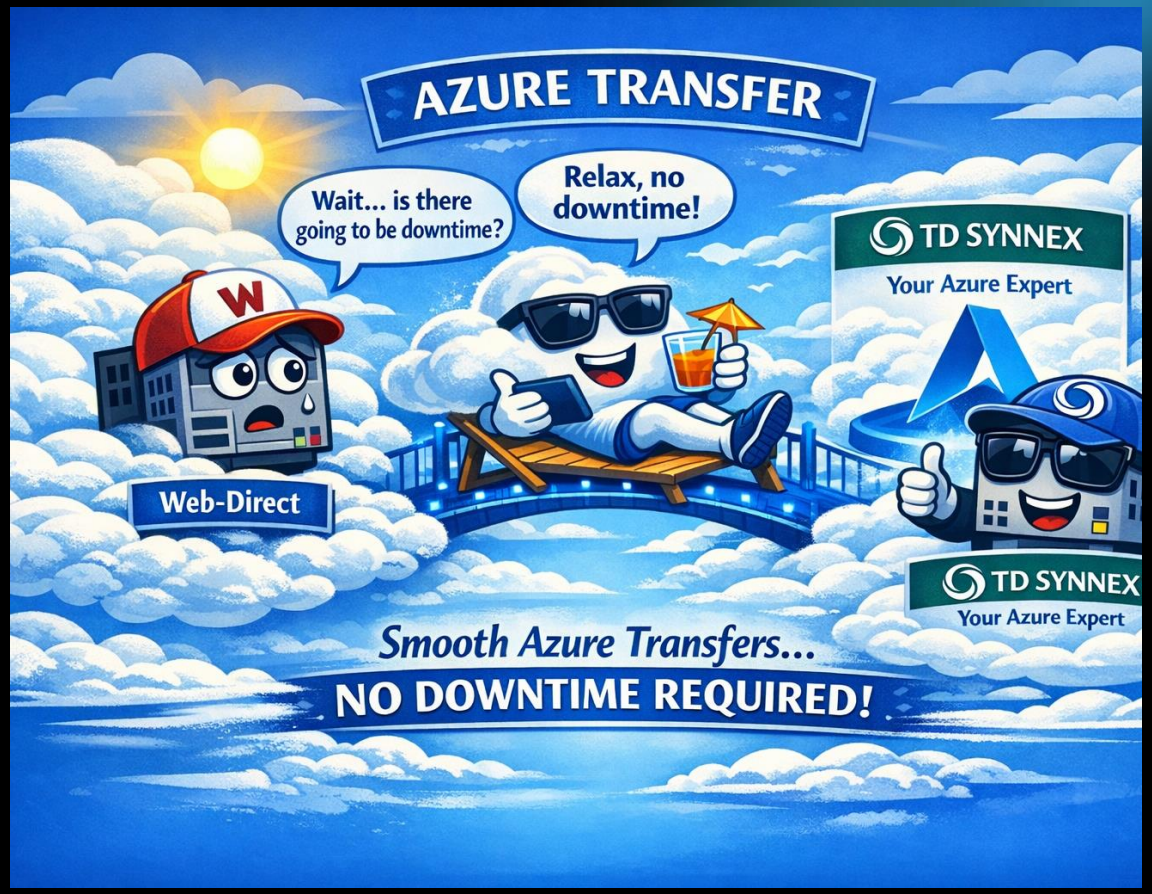

Field-Led to Partner-Led

- TD SYNNEX uses a structured, Microsoft-aligned process (CloudShift) to transition Azure subscriptions from field-led (Microsoft direct) to partner-led (CSP) without downtime or service disruption.
- TD SYNNEX coordinates requirements with the customer and Microsoft—ensuring correct permissions, subscription eligibility, and tenant alignment prior to initiating the transfer.

Pay-Go to CSP

- Microsoft's current subscription transfer guidance states that any Azure subscriptions not eligible for billing transfer to an MPA-based CSP partner require a technical migration, meaning resources must be moved from the Web-Direct source subscription into a new CSP subscription.
- Through a process created by our Microsoft contacts, we leverage a TD SYNNEX owned field-led billing scope as a conduit to perform a transfer without the need of a technical migration.

Technical Migrations

On-Prem to Azure Migrations

- **Migration Assessment & Planning**
  - TD SYNNEX's ServiceSolv team offers structured assessments to evaluate on-prem workloads and build a migration roadmap.
  - Various funding opportunities are available both from TD SYNNEX and Microsoft
- **Azure Migrate & Technical Enablement**
  - TD SYNNEX provides hands-on enablement around Microsoft's native migration tools.

Cloud Accelerate Factory

Speed

Eligible migrations can be completed in weeks using proven strategies and repeatable delivery motions.

Expertise

Microsoft engineers provide zero-cost deployment assistance and work side-by-side with the partner and customer

Coverage

Factory supports a broad set of scenarios—from infrastructure and database migrations to Azure Arc enablement, virtual desktop, analytics modernization, and security deployments.
